Revised Set of Objectives

After meeting with our guide/customer, Dr. Daniel Phillips, we have revised our set of objectives for the coming quarter and MSD II.

More realistic objectives were put towards the project. Below is a list of the new objectives:

- Build a robust arm that does not deflect a large amount
- Order the LCD Touch Screen that was selected by the team
- Build a weatherproof and robust case to enclose the LCD Touch Screen
- Design a Graphical User Interface that is easy to modify and set up in case another team later on needs to modify it
- Put everything together and get it working regardless if we manage to buy the computer or not. We can run the software off the Viewsonic or a laptop
- Test the whole system with Donna and record her response. Then make revisions based on those responses to optimize the user friendliness of the system.
