Orrtech	Installing PropDOS as the single program on your EEPROM allows you to display and choose what programs you want to start just as you would have with DOS on a PC. PropDOS has the following requirements for operation:	- Puts an OS on the EEPROM, might be useful for game play. - This looks really really useful, you can load different Propeller binaries from an SD Card AND Play .hmus or WAV files in the background. (K. S.)	Alana
Rays Logic	SD Card Interface Info	Links to FemtoBasic	Alana
FAT16 SD Propeller Code	SD Interface Propeller Code from object exchange found on Rays Logic Website	- Read speed should be about 300KBytes/second and write speed should be around 150KBytes/Second - Side Note: Apparently when they transitioned the code from SPIN to assembly, the methods associated with this sped up significantly.	Ketan
Hydra SD Max Storage Card	SD Interface, 1 GB SD Card Propeller drivers/API for interfacing with SD Card, Manual with tutorials	- Although we are not using the Hydra this might be a very useful resource - It comes with documentation on how to use the API's with examples - Comes with an actual interface - Only 21 Left in Stock
