

Feasibility Analysis

- Software will eliminate manual Pick List development.
- File manipulation should take less than a minute during run time.
- Straight forward navigation.
- Invalid Contract # will cause macros to malfunction.
- SD-1: Dependant on Standard Work generation.
- SD-1: Part-Asm. Station relationship needs to be predefined.
- SD-2: Optimization should only take a few minutes (pick list dependant) during run time.
- SD-2: Distance matrix will need to be updated as storage locations are added/modified.
- SD-2: Invalid Part # or Storage Location could generate an error in the algorithm.
