

12/20/2012

## Meeting Notes

### Discussed progress:

- Finalized Poug Chart
- Finalized Morphological
- Reviewed/Finalized Risk Assessment
- Discussed presentation points
  - Tiger muscle layout diagrams
  - All charts included
  - Organization

### Discussed Leg Muscle Layout and Design of Legs:

- Muscles are on legs with air supply tubes running to them from the body. Minimal cable usage in this design.
- Possibility of securing all muscles onto the body and running cables to each of the legs. The cables would wind around the joints in a pulley like manner.
- Combination of the two designs above. Having some muscles on the legs and some in the body of the robot. This seemed to have the most merit.
