

Dan Phillips Interview Notes - 09/09/15

- Phillips is a good resource for finding contacts/reviewing things
- Industry Standards possible contacts:
 - VA Walter Reed
 - Natalie Snyder (did internship with Walter Reed)
 - Phone calls more effective than email
 - Academics
- Measuring Angle:
 - Encoder (electrical way)
 - Talk to someone in the shop to see what they use
 - Protractor
- Can buy a dynamometer and engineer it to work for our project
- Get all info gather analyze it and decide what we can do given our constraints, show to Jon and possibly write a contract so that things don't keep changing.
- One design (best one) 3-4 different sizes next group/open source can always look at other hand designs
- Universal design (look at what all hands need to do what they are capable of and go from there)
- Start simple see where it doesn't work and modify
- **Look into industrial design contacts for design of actuator:
 - Stan Rickle (sp?)
- Also seek help from
 - Dr. Marshall
 - Dr. Doolittle
 - Prof. Brewer
