

- Need to distinguish between force axis at the receiving computer side.
- The ADC will generate 10 bit values.
- Solution is to send ADC data over two transmissions with two identifier bits prefixed.

Channel	Identifier Bits
Channel 1	00
Channel 2	11
Channel 3	01

Example: ADC generates 0100011111 for channel 2.

Packet 1 Sent: 

1	1	1	1	1	1	1
---	---	---	---	---	---	---

Packet 2 Sent: 

1	1	0	1	0	0	0
---	---	---	---	---	---	---
