

Team: 18262 Engineer: Greg Malanga

Entering Phase: Subsystem Build & Test

What do I plan on doing to ensure that Team P18262 has a successful Phase (Integrated System Build and Test) review?

1. I helped in the execution and debugging of Slave 4.0.
2. I redesigned the Slave to create rev 4.1.
3. I assembled the respin of the Slave boards.
4. I began testing of Slave 4.1, and make note of all issues that came up.
5. I wrote an outline for the technical paper, and began writing it.

You will answer these three questions when you submit at the end of Phase (Build & Test Prep).

1. Are Slave 4.1 board test plans fully executed?
2. Are there any remaining issues with the Slave board?
3. Was the integration test successful? What went wrong and how will we address the issues?
4. Is a new revision of the Slave board necessary?
