

Team: P18371

Engineer: Evan Rosenberg

Entering Phase: 1, MSD II

What do I plan on doing to ensure that Team P18371 has a successful MSD 2 Phase 1 review?

1. Develop manufacturing processes necessary to produce final design
2. Continue to refine design as necessary and ensure stresses are kept in check – do not exceed allowable
3. Stay in touch with Parker, work with Mike to source hydraulic cylinder
4. Select additional vendors for hydraulic cylinder
5. Produce predicted cost of making our own in house piston design.

You will answer these three questions when you submit at the end of MSD 2 Phase 1

1. What did I actually do?
2. What did I learn?
3. What do I plan on doing to ensure that Team P18371 has a successful Phase (5) review?
