

- Recommended Ideal Team:
  - 1 Biomedical Engineer with muscle physiology experience
  - 2 Electrical Engineer with software and hardware experience
  - 1 Industrial Engineers with design (preferably manufacturing) experience
  - 2 Mechanical Engineers with design (preferably 3D printing and CAD) experience
  
- Recommended Goals:
  - Increase design aesthetics, ergonomics, and robustness of device
  - Downsizing- through smaller COTS and circuit board design
  - Make the system wireless - remove all wired tethers from the system
  - Increase human testing.
  - Research into other more effective EMG and IMU sensors
  
- Financial Recommendations:
  - Increase initial budget to be \$1500
  - Allow greater team autonomy for the purchasing and ordering of parts
