

Team: MSD - P19105 Engineer: Stelios Moisidis

Entering Phase: 7 - Integrated System - Build and Test

What do I plan on doing to ensure that Team P19105 has a successful Phase (7) review?

Task 1: Have all Labview completed and ready for full scale testing and evaluation.

Task 2: Perform in depth testing of Load Cells, Accelerometers, and Mass Flow Rate sensor.

Task 3: Evaluate and construct post processing methods for raw data.

You will answer these three questions when you submit at the end of Phase (4).

Task 1: Yes, all LabView code is written and ready for implementation.

Task 2: Mostly, still waiting on main load cell in mail.

Task 3: Yes, still finalizing details, but mostly complete.

What have I learned as an engineer?

It is better to ask for help than waste time trying to constantly figure everything out on your own. Asking for help makes it so things get done quicker, and you can still learn as an engineer what you are doing and what needs to be completed.
